Docket No. SJO920010093US1  
Firm No. 0037.0101

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims**

1. (Previously Presented) A storage area network (SAN) including a first and second digital data processors executing a first and second operating systems, respectively, in communication with one or more storage devices, comprising:
  - a first platform-specific process executing on the first digital data processor;
  - a second platform-specific process executing on the second digital data processor,wherein the second operating system is different from the first operating system;
  - common platform-independent processes executing on the first and the second digital data processors; and
  - the platform-independent processes effecting execution of the first and second platform-specific processes via command line parameters.
2. (Previously Presented) The SAN of claim 1, wherein each of the platform-specific processes communicates with the platform-independent process via a command line interface of its respective digital data processor operating system.
3. (Previously Presented) The SAN of claim 1, wherein each of the first and the second operating systems can be any of a Unix™, a Windows™, Solaris, AIX operating systems.
4. (Previously Presented) The SAN of claim 1, further comprising a manager in communication with the common platform-independent processes to transmit a request thereto for information regarding one or more components of the SAN.
5. (Previously Presented) The SAN of claim 4, wherein the common platform independent processes respond to the request from the manager by invoking the first and second platform-specific processes, respectively.

Firm No. 0037.0101

6. (Previously Presented) The SAN of claim 5, wherein the invoked platform specific processes gather information regarding one or more SAN components and transmit the information to the Standard Output/Error of its respective digital data processor.
7. (Previously Presented) The SAN of claim 6, wherein the common platform independent processes capture information in the Standard Output/Error transmitted by the invoked platform specific process.
8. (Previously Presented) The SAN of claim 7, wherein the common platform independent processes transmit the captured information to the manager for further processing.
9. (Previously Presented) The SAN of claim 4, wherein the manager comprises a query engine for transmitting the request to the common platform independent processes.
10. (Previously Presented) The SAN of claim 9, wherein the query engine comprises a registry identifying the common platform independent processes and the digital data processors associated therewith.
11. (Previously Presented) The SAN of claim 10, wherein the registry provides one or more identifiers for communicating with the common platform independent processes.
12. (Previously Presented) The SAN of claim 9, wherein the query engine formats the request in a mark-up language format.
13. (Previously Presented) The SAN of claim 12, wherein the mark-up language can be any of XML and HTML.
14. (Previously Presented) The SAN of claim 13, wherein the platform independent processes format the captured information in a mark-up language format for transmission to the manager.

Serial No. 09/972,010  
Docket No. SJO920010093US1  
Firm No. 0037.0101

15. (Currently Amended) A storage area network having first and second digital data processors and one or more storage devices in communication with the digital data processors, comprising:

a manager in communication with the SAN components;

a first platform-specific process executing on the first digital data processor, the first digital data processor executing under a first operating system;

a second platform-specific process executing on the second digital data processor, the second digital data processor executing under a second operating system different from the first platform;

common platform-independent processes executing on the first and the second digital data processors and communicating with the first and the second platform-specific processes via one or more command-line parameters; and

the manager transmits a query to the common platform-independent processes to request information regarding one or more of the SAN components and the platform independent processes invoke the first and second platform-specific processes, respectively, to obtain the requested information.

16. (Previously Presented) The SAN of claim 15, wherein the invoked platform specific process gathers information regarding one or more of the SAN components and transmits the information to a command line interface of its respective digital data processor operating system.

17. (Currently Amended) ~~[[the]]~~ The SAN of claim 16, wherein the common platform independent processes capture the information in a Standard Output/Error transmitted by the invoked platform specific process.

18. (Previously Presented) The SAN of claim 17, wherein the manager comprises a query engine for forwarding the query from the manager to the common platform independent process.

Firm No. 0037.0101

19. (Previously Presented) The SAN of claim 18, wherein the query engine comprises a registry containing information for identifying the common platform independent process and its respective digital data processors.

20. (Previously Presented) The SAN of claim 19, wherein the common platform independent process registers with the registry to provide identification information thereto.

21. (Previously Presented) Computer readable media including code executed by a first and second digital data processors having first and second operating systems in communication with one or more storage devices, wherein the code comprises:  
a first platform-specific process executing on the first digital data processor;  
a second platform-specific process executing on the second digital data processor,  
wherein the second operating system is different from the first operating system;  
common platform-independent processes executing on the first and the second digital data processors, wherein the platform-independent processes effecting execution of the first and second platform-specific processes via command line parameters.

22. (Previously Presented) The computer readable medium of claim 21, wherein each of the platform-specific processes communicates with the platform-independent process via a command line interface of its respective digital data processor operating system.

23. (Previously Presented) The computer readable media of claim 21, further comprising:  
a manager in communication with the common platform-independent processes to transmit a request thereto for information regarding one or more components of the SAN.

24. (Previously Presented) The computer readable media of claim 21, wherein the common platform independent processes respond to the request from the manager by invoking the first and second platform-specific processes, respectively.

25. (Previously Presented) The computer readable media of claim 24, wherein the invoked platform specific processes gather information regarding one or more SAN components and transmit the information to the Standard Output/Error of its respective digital data processor.

26. (Previously Presented) The computer readable media of claim 24, wherein the manager comprises a query engine for transmitting the request to the common platform independent processes.
